

Swipe left for the 3 major benefits of recycling aluminium through Euralco..

Benefit #1

We relieve our shipbuilding customers by collecting rest materials and scrap in 5083 alloy - and return them to the foundry.

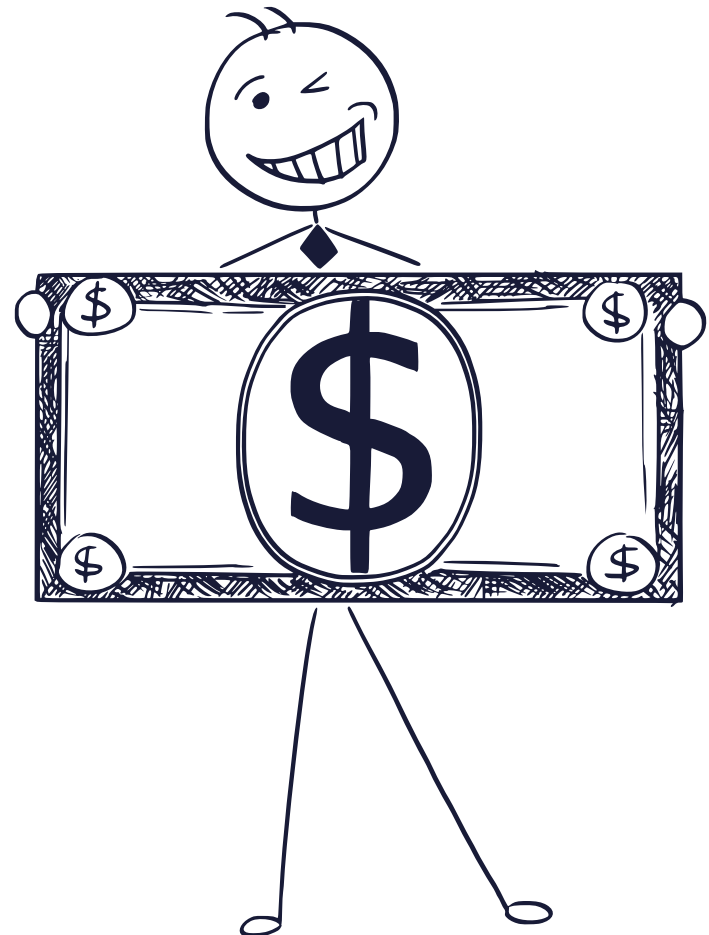

By using recycled aluminium we ensure significantly lower energy consumption for casting rolling slabs (while never compromising on quality!).

Benefit #2&3

Customers selling their rest materials and scrap to us:

- Receive 90% of LME
- Omit the Magnesium premium of future orders.

We are continuously expanding our products with lowest possible carbon emissions.

WANT TO JOIN THIS DEVELOPMENT?

Let's discuss how we can work together and push the boundaries of re-using your scrap in new products and applications.
